

I am the Station Manager of a 250 watt daytime/4 watt nighttime signal, located in a valley. During the daytime hours, interference is our culprit, and at night, we are reduced to covering "blocks" within our community. The ability to rebroadcast our signal via an FM translator would be of great benefit to our listeners. Our community does not have an emergency warning system. When a severe weather warning is issued, when schools or factories are closed due to ice and snow, many of our listener's cannot hear this information during the day, and nighttime brings even more peril to the public. The ability to broadcast local election returns, high school sports and additional community events so that all within our town can hear would mean a great deal to the public, as this request is heard frequently. Please allow AM stations to rebroadcast on FM.

Thank you for your consideration,

Jerri L. Pruet
